PROJECTS

PHISH-CATCHER: CLIENT-SIDE DEFENCE AGAINST WEB SPOOFING ATTACKS USING MACHINE LEARNING

- Designed a client-side defence mechanism that analyses real-time web features such as URL structure, HTML content, and user behaviour. Built using Python, Django, and MySQL, and integrated with scikit-learn for model training and prediction.

PHISHING DETECTION SYSTEM THROUGH HYBRID MACHINE LEARNING

- Analyses URLs to detect and block phishing using multiple ML algorithms for higher accuracy. Engineered features from URL structure, domain data, and webpage behaviour to classify phishing vs. legitimate sites with high precision.

DTMF BASED ON INDUSTRIAL AUTOMATION

- It is based on the industrial operation, which is used to prevent the workers from injuries.

- It is totally automated and can operate from a single space.
